Education

Bennett University, Greater Noida, Uttar Pradesh

Aug 2023 – May 2027

Bachelor of Technology in Computer Science Engineering (Artificial Intelligence)

CGPA: **7.66/10.0**

Technical Skills

Languages: Python, C++, SQL, HTML, CSS

AI/ML: TensorFlow, PyTorch, Scikit-Learn, Keras, Deep Learning, Computer Vision, Neural Networks

Web: React.js, TypeScript, Tailwind CSS, Node.js

Databases: MySQL, MongoDB, Firebase

Tools: Git, GitHub, VS Code, Vercel

Core CS: DSA, OOP, DBMS, Operating Systems, Computer Networks

Projects

Sprout Circle – Smart Daycare Management Platform

May 2025

React, TypeScript, Tailwind CSS, Firebase, Node.js, SQL

- Construction of an all-encompassing child care management software system using React, TypeScript, Firebase, Node.js, and SQL technologies. The platform features role-based authentication, live chatting capabilities, and solid security of information.
- Introduced AI-powered chatbot services, bus tracking via GPS, payment gateway, and children progress tracking at day cares.
- Developed the frontend of the platform.

Interactive Developer Portfolio

Jun 2025

React.js, Tailwind CSS, Framer Motion, JSON, Vercel

- Created and launched a responsive portfolio dashboard using React.js, Tailwind CSS, and Framer Motion to showcase projects, technical expertise, certificates, and academic publications.
- Enabled dynamic content management, performance tuning, and compliance with current UI/UX standards, resulting in a scalable and manageable web application running on Vercel.
- Improved accessibility, responsiveness, and user engagement through the use of engaging animations, a modular approach, and best practices in frontend development.

AEGIS STISION – Vision-Based Threat Detection Framework

Oct 2025

Python, PyTorch, TensorFlow, Scikit-Learn, OpenCV

- Created an AI-based framework for image steganalysis and threat detection, using machine learning, deep learning, and computer vision approaches to detect covert messages and any alterations in digital images.
- Utilized the ResNet, EfficientNet, and Transformer neural network structures, along with OpenCV based feature extraction and anomaly detection, on the ALASKA2 dataset to improve the effectiveness of forensic image analysis.
- Built an end-to-end detection system that involves all processes from data pre-processing to feature generation, model evaluation, and classification within forensic image analysis.

Research Experience

Robust Human Pose Estimation Using Multi-Dataset Training

Ongoing Research Manuscript

Python, PyTorch, TensorFlow, OpenCV, Computer Vision

- Implemented the concept of a combined Human Pose Estimation approach based on HRNet, AlphaPose, and EfficientPose models that solve the problem of occlusions, crowded environments, and variations in poses using deep learning methods.
- Developed a training process on multiple datasets using the COCO, MPII, and CrowdPose datasets in order to improve the generalizability and localization of keypoints for practical purposes.
- Made a comparative study between different human pose estimation approaches, such as OpenPose, ViTPose, TokenPose, RTMPose, and DWPose, using PCKh and AP as evaluation criteria.

Certifications

Microsoft Power BI Data Analyst

SQL for Data Science

Operating Systems and You

TensorFlow for AI, ML and Deep Learning
